

What to know about Flashing Yellow Arrows

A Better Left-Turn Signal

Safer

A national study demonstrated drivers had fewer crashes with the flashing yellow left-turn arrow than with the traditional yielding left-turn indication.

Less Delay

You have more opportunities to make a left turn with the flashing yellow left-turn arrow than with the traditional yielding left-turn indication, which keeps you moving.

More Flexible

The new display provides traffic engineers with more options to handle variable traffic volumes.

The Missouri Department of Transportation is implementing a new traffic signal display to provide a safer, more efficient left turn for motorists. The flashing yellow arrow left-turn indication is a new type of display that can replace the circular green indication for left turns at selected signalized intersections.

Flashing Yellow Arrow

Flashing Yellow Arrow = Circular Green for Left Turn: Both mean YIELD

The new flashing yellow arrow indication provides a more direct message than the circular green for left turns – yield to opposing traffic and pedestrians when you see it displayed. It reduces confusion since the left turn display is no longer the same indication as the adjacent through lanes. Like the circular green, there will be a sign adjacent to the left turn signal display explaining the meaning.

A National Study Confirms It's A Better Left-Turn-Signal

Several states, including Missouri, are currently using this type of signal. We expect the new signals to become the preferred signal display for left turns. A national study conducted for the Federal Highway Administration demonstrated the new indication helps to prevent crashes, move more traffic through intersections, and provide additional traffic management flexibility for road agencies.

Steady Circular Red

It requires you to stop and wait during this interval.

Steady Yellow Arrow

It warns you that the left-turn signal is about to change to red and that you should prepare to stop – or prepare to complete your left turn if you are legally within the intersection and there is no conflicting traffic present.

Flashing Yellow Arrow

It allows you to turn left when oncoming traffic is clear [oncoming traffic has a green light]. You must carefully determine that there is an adequate gap in the oncoming traffic, and ensure that there are no pedestrian conflicts, before making your turn.

Steady Green Arrow

It allows you to turn left.

How does a flashing yellow arrow work?

A flashing yellow arrow means left turns are allowed, but you must first yield to oncoming traffic and pedestrians and then proceed with caution.

Drivers must always remember: a flashing yellow arrow = turn with caution.

What should motorists do when approaching the flashing yellow left-turn signal?

Drivers should stop at the intersection, and yield to oncoming traffic. When it is safe, make your left turn and proceed through the intersection. After it flashes, the flashing yellow left-turn arrow then becomes the steady (non-flashing) yellow left-turn arrow. Drivers should treat the steady yellow arrow just like a standard yellow light. Prepare to stop before the red light appears.

Will the flashing yellow arrow be on all day?

An advantage of the flashing yellow left turn display is that it gives traffic engineers the flexibility to use specific indications during different times of the day. This means the flashing yellow arrow or steady green arrow may not be seen every time you approach the intersection. This will reduce your wait times at a signal using this display.
